MBPP+
Macro, 3 informative benchmarks
Accuracy minus sampling at same budget (points)
pure width (sampling baseline)
Width B (depth $R = C/(A_0 B)$)
Allocation family
Private team
Peer
Averaged over the budgets $C/A_0 \in \{4, 6, 8, 10, 12, 15, 20, 25\}$. Faint points are individual budget cells. $B = 1$ is one agent revising R times; the zero line is $B = C/A_0$ independent samples with a vote.
